Small artery tone under control of the endothelium

**On the importance of EDHF and myogenic tone
in organ (dys)function**

Simone K. Gschwend

Publication of this thesis was supported by generous contributions from:

Bristol-Myers Squibb, GlaxoSmithKline, the Groningen University Institute of Drug Exploration (GUIDE), Merck Sharp & Dohme, the Rijksuniversiteit Groningen, Sanofi-Synthelabo, Servier.

Gschwend S.K.

Small artery tone under control of the endothelium. On the importance of EDHF and myogenic tone in organ (dys)function.

Dissertation. –with Dutch summary

RIJKSUNIVERSITEIT GRONINGEN

Small artery tone under control of the endothelium

On the importance of EDHF and myogenic tone in organ (dys)function

Proefschrift

ter verkrijging van het doctoraat in de
Medische Wetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
woensdag 29 oktober 2003
om 14:15 uur

Financial support by the Netherlands Heart Foundation for the publication of this thesis is gratefully acknowledged.

Contents

| | | |
|-----------|---|----|
| Chapter 1 | General Introduction | 9 |
| | Vascular tone under control | 10 |
| | Small arteries and arterioles | |
| | Diameter control in small arteries and arterioles: an overview | |
| | Different vascular beds: coronary, mesenteric, and renal arteries | |
| | The vascular smooth muscle | 13 |
| | The endothelium | 15 |
| | Endothelium-derived contracting and relaxing factors | |
| | Functional assessment of endothelial (dys-)function: the ACh test | |
| | Endothelium-derived hyperpolarizing factor (EDHF) | |
| | Role of vascular ion channels in mediating constriction and dilation | 18 |
| | Ion channels on vascular smooth muscle cells | |
| | Ion channels on endothelial cells | |
| | Small artery function in progressive organ disease: a vicious circle | 22 |
| | Small artery dysfunction precedes and promotes organ disease | |
| | Organ disease promotes small artery dysfunction of other organ circulations | |
| | Increased total peripheral resistance reinforces organ disease progression | |
| | Endothelium-derived mediators involved: NO versus EDHF | |
| | This thesis | 24 |
| | Scope | |
| | Research objectives | |

| | | |
|------------|---|-----|
| Chapter 2 | Impaired coronary endothelial function in a rat model of spontaneous albuminuria <i>Kidney Int</i> 2002; 62: 181-191 | 33 |
| Chapter 3 | Endothelial dysfunction and infarct size relate to impaired EDHF response in rat experimental chronic heart failure <i>Eur J Heart Fail</i> 2003; 5: 147-154 | 55 |
| Chapter 4 | Myogenic constriction is increased in mesenteric resistance arteries from rats with chronic heart failure: Instantaneous counteraction by acute AT ₁ receptor blockade <i>Br J Pharmacol</i> 2003; 139: 1317-1325 | 69 |
| Chapter 5 | Coronary myogenic constriction antagonizes EDHF-mediated dilation. Role of K _{Ca} channels <i>Hypertension</i> 2003; 41: 912-918 | 87 |
| Chapter 6 | Endothelial dilatory function predicts individual susceptibility to renal damage in the 5/6 nephrectomized rat <i>J Am Soc Nephrol</i> 2002; 13: 2909 - 2915 | 103 |
| Chapter 7 | Does low sodium diet exert a protective effect on endothelial mediators in normal rats? <i>J Lab Clin Med</i> 2001; 138: 200-205 | 117 |
| Chapter 8 | Chronic ACE inhibitor therapy differentially modulates mediators of endothelium-dependent dilation in small renal and mesenteric arteries. Effect of dietary sodium restriction <i>Submitted</i> | 129 |
| Chapter 9 | General Discussion | 147 |
| | Mechanisms of disease-related EDHF impairment | 148 |
| | Future directions on the therapeutic potential of K _{Ca} channel openers | 156 |
| | Variability of endothelial dilator function among healthy individuals. Does it predispose some individuals for development of renal damage? | 157 |
| | Future directions for individual risk assessment, and strategies to prevent renal damage | 159 |
| Chapter 10 | Background and technicalities | 160 |
| | Summary, Samenvatting & Acknowledgements | 185 |
